- Ratio scale :- A ratio scale is a quantitative scale where there is a true zero and equal intervals between neighboring points. Unlike on an interval scale, a zero on a ratio scale means there is a total absence of the variable you are measuring.
- Interval scale :- The interval scale is a quantitative measurement scale where there is order, the difference between the two variables is meaningful and equal, and the presence of zero is arbitrary.

- Nominal scale :- This measurement normally deals only with non-numeric (quantitative) variables or where numbers have no value.
